

## Task 6: Create a Strong Password and Evaluate Its Strength

---

**Objective:** Understand what makes a password strong and test it against password strength tools.

- **Step 1: Create multiple passwords with varying complexity**
- Examples (don't actually use these, just for testing):
  - Simple: apple123
  - Medium: Appl3Tree!
  - Strong: M@ngo!SunR1se2025
  - Very strong: G9&kP#7sQ!2fRz8hT@
- **Step 2: Use uppercase, lowercase, numbers, symbols, and length variations**
  - **Lowercase only:** passwordtest
  - **Mixed case:** SecureTest
  - **Case + numbers:** Secur3Pass
  - **Case + numbers + symbols:** S3cur3!Pass#
  - **Long passphrase:** BlueElephantsDanceAtMidnight2025!
- Step 3: Test each password on a password strength checker

Test Your Password		Minimum Requirements			
Password:	apple123	<ul style="list-style-type: none"> <li>Minimum 8 characters in length</li> <li>Contains 3/4 of the following items: <ul style="list-style-type: none"> <li>Uppercase Letters</li> <li>Lowercase Letters</li> <li>Numbers</li> <li>Symbols</li> </ul> </li> </ul>			
Hide:	<input type="checkbox"/>				
Score:	32%				
Complexity:	Weak				
Additions		Type	Rate	Count	Bonus
✓	Number of Characters	Flat	$+(n^*4)$	8	+ 32
✗	Uppercase Letters	Cond/Incr	$+(len-n)^*2$	0	0
✓	Lowercase Letters	Cond/Incr	$+(len-n)^*2$	5	+ 6
✓	Numbers	Cond	$+(n^*4)$	3	+ 12
✗	Symbols	Flat	$+(n^*6)$	0	0
✓	Middle Numbers or Symbols	Flat	$+(n^*2)$	2	+ 4
✗	Requirements	Flat	$+(n^*2)$	3	0
Deductions		Type	Rate	Count	Bonus
✓	Letters Only	Flat	$-n$	0	0
✓	Numbers Only	Flat	$-n$	0	0
⚠	Repeat Characters (Case Insensitive)	Comp	-	2	- 2
✓	Consecutive Uppercase Letters	Flat	$-(n^*2)$	0	0
⚠	Consecutive Lowercase Letters	Flat	$-(n^*2)$	4	- 8
⚠	Consecutive Numbers	Flat	$-(n^*2)$	2	- 4

|----------------------|------------------|----------------------------------------|
| • Password           | • Strength Score | • Feedback Example                     |
| • apple123           | • Weak           | • Too short, common word               |
| • Appl3Tree!         | • Medium         | • Better, but still somewhat guessable |
| • M@ngo!SunR1se2025  | • Strong         | • Long and diverse                     |
| • G9&kP#7sQ!2fRz8hT@ | • Very Strong    | • Extremely hard to crack              |

- |                         |                  |                                     |
|-------------------------|------------------|-------------------------------------|
| • Password              | • Strength Score | • Feedback Example                  |
| • BlueElephantsDance... | • Very Strong    | • Secure due to length & randomness |
- **Step 5: Identify best practices for creating strong passwords**
  - From testing, you'll notice:
    - Length **matters more** than just complexity.
    - Random words/phrases are harder to crack than short, complex ones.
    - Avoid dictionary words or personal info.
    - Use **symbols, numbers, and case variation**.
    - Consider using a **passphrase** (long + memorable)
  - **Step 6: Write down tips learned**
    - Aim for **at least 12–16 characters**.
    - Mix **uppercase, lowercase, numbers, and symbols**.
    - Avoid patterns (e.g., 123456, Qwerty@2025).
    - Use a **password manager** to store unique passwords for each account.
    - Enable **multi-factor authentication (MFA)** for extra security.
  - **Step 7: Research common password attacks**
    - **Brute force:** Tries all possible combinations until it finds the correct one.
    - **Dictionary attack:** Uses a precompiled list of common words and passwords.
    - **Credential stuffing:** Uses leaked usernames/passwords from other breaches.
    - **Phishing:** Tricks you into revealing passwords.
    - **Keylogging:** Malware records keystrokes.

- **Step 8: Summarize how password complexity affects security**
  - **Short/simple passwords** are cracked in seconds using brute force or dictionary attacks.
  - **Medium complexity** adds resistance but still guessable if reused or too short.
  - **Long + complex (16+ chars)** passwords are highly resistant to brute force.
  - **Passphrases** (random words + symbols/numbers) are both secure and easier to remember.
  - Overall: **Length + randomness = strongest defense.**
